

Board to Board Specialists

Key Benefits

The cost benefit of GradConn's Far Eastern manufacturing is now available outside of Asia. Our global sales network of local distributors and representatives are there to provide the high level of service you need.

Our Head Office is located in Taiwan with friendly English speaking staff, our manufacturing facilities are located in China.

GradConn produce high quality board to board connectors in 0.50, 0.80, 1.00, 1.27, 2.00, 1.27 x 2.54, 2.54, 3.96 and 5.08mm pitches as well as a range of SIM card connectors to compliment the board to board range.

Manufacturing ISO9001 certification means GradConn will supply you assuredly high quality components whilst still giving you the very best value for your money.

All GradConn parts are fully RoHS compliant and we have a variety of high temperature options suitable for lead-free reflow processing.

Our customers benefit from our flexible approach to manufacturing. GradConn supply a choice of plating options, customer specifiable pin lengths (pin headers) and insulator height options on many connectors with no cost penalty. In many cases GradConn can provide amended versions of existing connectors, for example: different size SMT lead sizes, headers with angled pins and non standard pitch products.

If the part you require is bespoke, we have proven capabilities of producing customer specified parts.

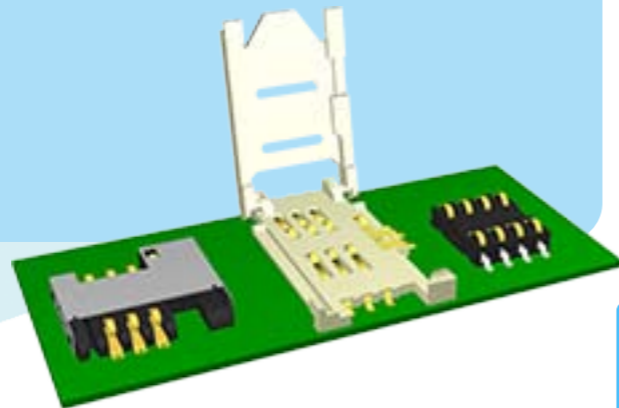

Either way, you get exactly the right connector for your application, with the additional cost benefits that our manufacturing facility in China brings.

If you are already using board to board connectors from a proprietary brand, you can make immediate savings by using alternative Gradconn products. We would be pleased to cross-refer parts for you.

You can approve products quickly with our sample service and be confident whether it's a new or existing design, that quality need not be sacrificed to make significant savings.

We are constantly improving and expanding our range of products. Please check our website regularly for details.

At Gradconn our aim is to ensure that we are easy to work with whilst protecting your budget, leaving you free to do what you do best.

Stringent quality control systems - manufacturing to ISO9001.

Surface mount or through hole components, straight or right angle, male or female. We produce single, dual, triple and quad row types.

SIM card connectors in receiver, flip and contact styles.

Multiple plating options and thicknesses available - gold, selective gold (duplex) and tin.

Tape and reel or tube packaging with pick and place pads or film to allow vacuum suction for automatic SMT placement.

Custom pin lengths on male headers, giving you total design control.

Cross-referral service in person or on-line (cross referred samples should always be inspected to ensure project suitability as an exact match is not guaranteed).

Free and fast sample service.

Short production lead-times.

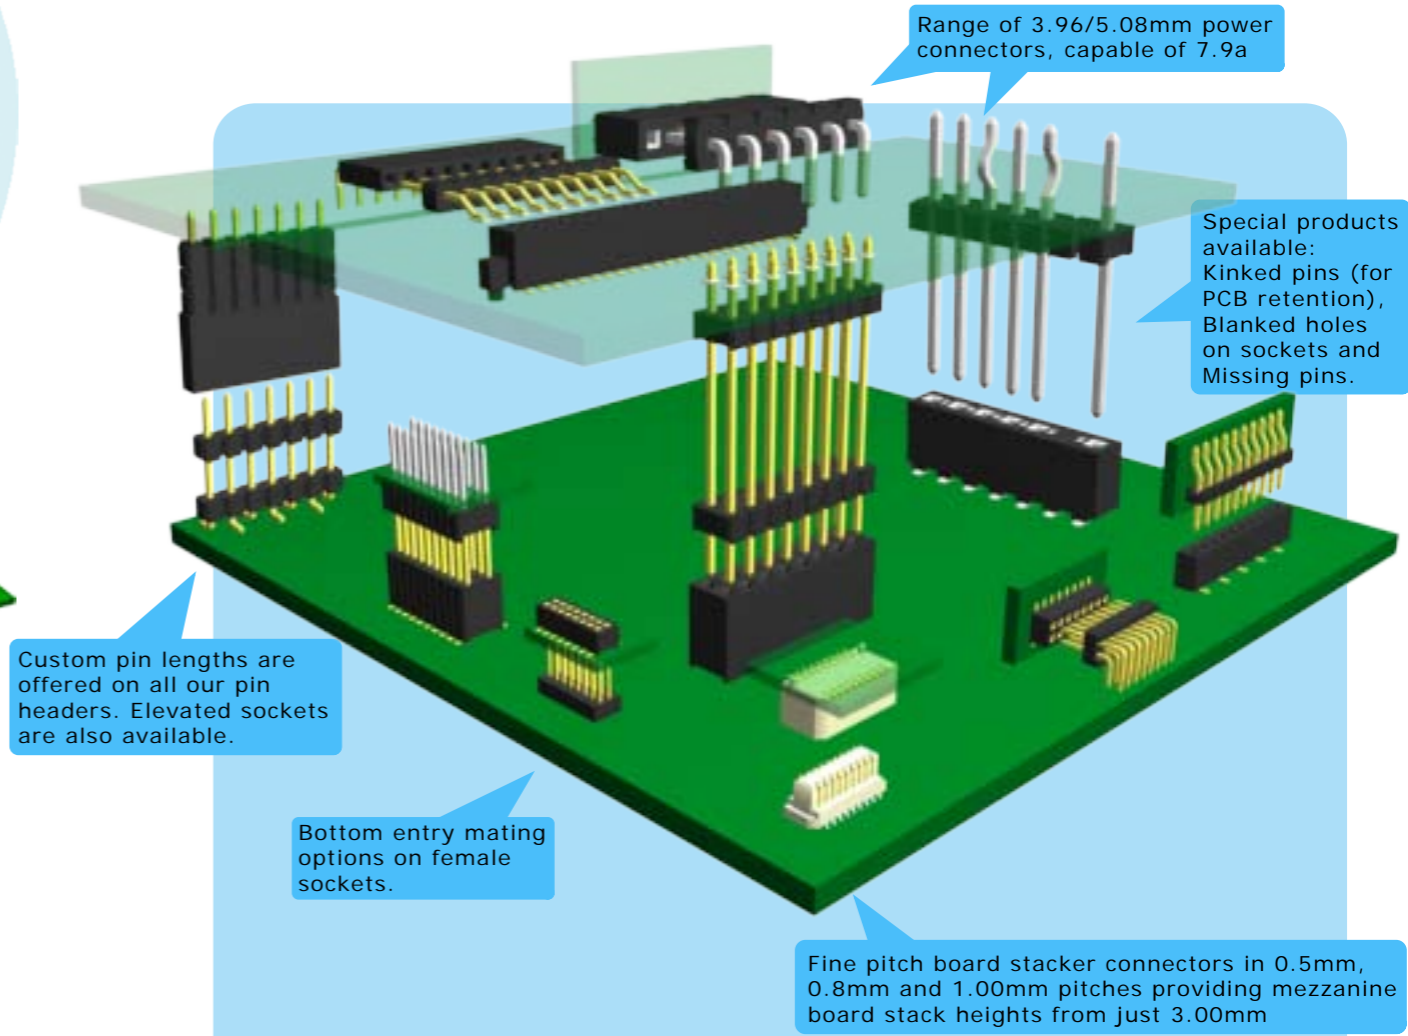

Full technical support both locally and at factory level ensuring that you can always speak to somebody in your own time zone.

Established European distributor network, keeping your supply chain simple.

Local contacts selected to provide partnership, advice and support in your language.

With all these advantages, why pay more?

Contact Gradconn for your next connector requirement.
